SUMMARY

Enthusiastic 3rd-year IT student with a growing skillset in programming and problem-solving. Seeking an entry-level IT internship to apply academic knowledge and contribute to a real-world project

---

PROJECTS

Type-dd   Feb 2024

- Using convex for backend handling together with the provided database
- Clerk as the authenticator
- Nextjs as the Frontend and backend framework
- Type_DD is a site that support programming in various languages online and does not require anything to be run and compile locally
- Used piston Api to make calls for compiling and execution and also for error handling

Kanto Pokédex   Jan 2024

- Used PokeApi to get information and saved it in local cache to reduce the Api calls
- Worked with a custom CSS library to design the frontend
- Created with help of React and Vite

Wrecked Aliens   November 2023

- Used JS as the language to construct the logic behind the game with using OOP as the principle for structuring
- HTML5 Canvas was preferred to support the images inside a canvas
- Controls are as follows: Arrow keys for moving the horse and space bar for firing
- Only works in Desktop and not Mobile as the Canvas doesn't fit on smaller screen

---
